

Digital Literacy Portfolio

Name: ABPNEET SINGH

Registration Number: 25BAI11415

Branch: CSE [AIML]

Year: 1st Year

Course Code: CSE0001

March 28, 2026

Introduction

This project is based on the concept of digital literacy, which is an essential skill in today's technology-driven world. As a student digital ambassador, the aim of this project is to understand and demonstrate how digital tools and platforms can be used effectively, safely, and professionally.

The project consists of five tasks that cover important aspects such as online presence, digital platforms, coding practice, professional communication, and cybercrime awareness. Each task helps in building practical knowledge and real-world skills that are useful for academic and professional growth.

Task 1: Digital Literacy Infographic

For this task, I created a digital literacy awareness infographic using Canva that covers three important topics: professional online presence, safe internet practices, and useful digital tools for students. The infographic explains how students can build a strong and positive identity online using platforms like LinkedIn and GitHub, which are important for future career opportunities.

It also highlights essential safety practices such as using strong passwords, avoiding suspicious links, and protecting personal information online. In addition, I included commonly used digital tools like Google Docs, Google Drive, and online learning platforms, which help students improve productivity and collaboration in their academic work.

While creating the infographic, I found it interesting to balance content with design elements. The challenging part was organizing the content without making it too crowded. This task helped me understand the importance of presenting information effectively.

Task 2: Digital Portfolio

For this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals to showcase their skills, projects, and achievements.

GitHub is mainly used for sharing coding projects and building a technical portfolio.

LinkedIn is a professional networking platform where I added my education details and created a profile. Kaggle is a platform for data science and machine learning practice.

These platforms will help me build a strong online presence over the next four years. I plan to regularly update my GitHub with projects, use LinkedIn for networking, and improve my skills on Kaggle.

Task 3: Platforms

In this task, I explored coding and collaboration platforms by using HackerRank and Google Forms. On HackerRank, I completed a beginner-level problem which helped me understand basic programming concepts.

I also created a Google Form consisting of five questions related to digital literacy. The form included both multiple-choice and short-answer questions. I analyzed responses using Google Sheets.

These tools are helpful for academic purposes as they improve coding skills and allow easy data collection and collaboration.

Task 4: Email Etiquette

In this task, I learned the importance of professional communication through emails. Poorly written emails can create misunderstandings and leave a negative impression.

For example, if a student sends an email without a proper subject or greeting, it may appear unprofessional. This can be avoided by using a clear structure, polite tone, and proper formatting.

This task helped me understand how effective communication plays a key role in academic and professional environments.

Task 5: Cybercrime Awareness

While researching cybercrime, I focused on phishing attacks. I was surprised by how easily people can be tricked into sharing sensitive information through fake emails and websites.

Phishing attacks can lead to serious consequences such as financial loss and identity theft. This made me more aware of the importance of online safety.

As a result, I will be more cautious while using the internet and will always verify sources before sharing any personal information.

Conclusion

This project helped me gain a better understanding of digital literacy and its importance in everyday life. I learned how to use digital tools effectively, communicate professionally, and stay safe online.

Overall, this project enhanced my technical knowledge, awareness, and confidence in using digital platforms for academic and professional purposes.
