◆ Summarize responses

#Ds@w12

the password with special character , numbers , capital letters etc to make password strong

!Dsw@123

A strong password is at least 16 characters long, unique to each account, and contains a mix of uppercase/lowercase letters, numbers, and symbols. It avoids predictable words, personal info (names, birthdays), and common patterns like "123456". Using long, random passphrases is an effective way to create memorable yet secure passwords.
